Pollution Incident Reduction Plan Statement

This statement is produced to comply with the statutory requirement for water companies to publish an annual Pollution Incident Reduction Plan (PIRP) and is produced following the guidance[1] published by Natural Resources Wales and the Environment Agency. The guidance states that:

In PIRPs, relevant undertakers must:

- *review the measures that are currently in place and resulting pollution incidents attributable to their system over the preceding calendar year*
- *explain how they will reduce the occurrence of pollution incidents that are attributable to their system in the next calendar year*

Albion Eco is a relevant undertaker as described by the guidance and provides water services to industrial customers in Wales.

The guidance sets out the systems to be reported on:

The sewage system is defined in Section 17BA(7) of the Act[2] as comprising the public sewers, facilities for emptying public sewers, the sewage disposal works, other facilities for dealing with the contents of public sewers and lateral drains that you are required to develop and maintain.

The water supply system is defined in Section 17B(4A) of the Act defines as comprising reservoirs and other places of storage, treatment works, water mains and pipes that you are required to develop and maintain.

Albion Eco does not operate a sewerage system, and although we provide a bulk supply of water to our inset, the water network is privately owned. Therefore, Albion Eco does not operate any relevant systems.

We have therefore determined that Albion Eco is not required to publish a Pollution Incident Reduction Plan (PIRP).

This statement will be reviewed annually.

Angela Cutler

Regulatory Director
